Dear Readers,

This edition of Specials is about freedom on a large scale. Why? Because the system solutions and machines described on the following pages enable you to work without trailing cables or dust – and thanks to Pick + Mix, you'll also have the option of buying only what you want and need.

So the thinking behind our system is also cost effective for you. Anyone working with our cordless machines can use every ampere size of battery pack within a single voltage class on any same voltage class machine and recharge it on one charger. For 18V devices this effectively means more than 80 tools, one battery, one charger. You save money because you do not have to buy batteries and a charger with every new machine.

And if the roughly 1,200 Watts that our LiHD packs deliver at 18 Volts is not enough for you, just take two and you'll have double that power. All 36V devices, such as the large angle grinder, the SDS Plus combination hammer or the cordless table saw, are always available in one version using two 18V battery packs. Here, too, you have the option of choosing between 36V or two lots of 18V.

With so much freedom on offer, working with cordless is much more fun. Try it.

I wish you an enjoyable experience working with our tools,

Yours,
Horst W. Garbrecht
CEO Metabo
