Metabo’s system solutions for the new OSHA Silica Rule, now in effect.

October 4, 2017 – West Chester, PA –

Metabo Corporation, a leading international manufacturer of industrial grade cordless and corded hand-held power tools and accessories, offers a full-line of dustless tools and accessories, including tools for concrete and stone surface prep as well as masonry cutting, drilling, and breaking.

“As of September 23, 2017, OSHA requires all and any indoor and outdoor drilling, cutting or grinding operations to be dustless on the jobsite”. “Metabo has a long history as a leader in safety and innovation; we are ready with an integrated dustless system.” “Metabo renovation grinders, cutting/scoring tools, angle grinders and shrouds, rotary hammers and extractors combined with the self-cleaning HEPA vacuum provide system solutions to help comply with the new regulation,” said Antoine Derché, Metabo’s Director of Product and Marketing.

Metabo’s ASR 35 ACP HEPA Auto-clean vacuum (US602057800), made in Germany, allows the user to attain the highest level of dust protection on the job-site. The exclusive filter cleaning mechanisms use electromagnetic vibration, which provides continuous suction, as opposed to reverse flow systems that lose suction during cleaning. The ASR 35 ACP HEPA Auto-clean vacuum has 130 CFM airflow, a 9-gallon capacity and has an 11 amp motor. The vacuum features an integrated tool outlet, when a tool is plugged into the outlet the vacuum automatically starts and stops when the tool is turned on or off.

Metabo’s wide range of specialty concrete/stone surface prep and masonry cutting tools are made in Germany. These tools are engineered to be long lasting and powerful, able to take on the most heavy-duty challenges and can readily hook up to Metabo’s integrated dustless system.
