# PRESS RELEASE

## Metabo's Introduces Dust Extraction Bits

*For dustless drilling and increased drilling speed.*

**October 10, 2017 – West Chester, PA –**  
Metabo Corporation, a leading international manufacturer of industrial grade cordless and corded hand-held power tools and

accessories, introduces their new line of 11 SDS-Plus and SDS-Max Dust Extraction Bits, made in Germany, for use in dry materials.

“Metabo’s new dust extraction bits are an addition to Metabo’s existing dustless solution system for “Table 1 Compliance” of the OSHA Silica Rule.” “These bits combined with Metabo’s complete line of corded and cordless Rotary Hammers and the ASR 35 ACP HEPA vacuum with auto cleaning functionality, make for the ultimate performance dustless drilling system,” said Hal Martin, Metabo’s Product Manager of Accessories.

The dust extraction bits produce up to 98% less dust in the drilling hole than regular drill bits. Each bit has 4-cutter heads and two suction holes, distributed evenly on the head to provide optimum bit integrity. When compared to the Y-shaped cutter head of another manufacturer, which has one suction hole in the middle that compromises the bits strength and leads to premature bit failure, you can understand why Metabo’s 4-cutter head dust extraction bits lead in industry performance and duration. Metabo’s new bits work with all SDS-plus and SDS-max rotary hammers. The vacuum adapter has a 35mm (1-3/8”) universal connection to fit all standard or HEPA vacuums.
