Metabo Introduces the 5” Variable Speed Concrete Renovation Grinder

The most powerful, compact and lightweight model of its generation. For efficient, easy concrete renovation and finishing.

November 17, 2017 – West Chester, PA –

Metabo Corporation, a leading international manufacturer of industrial grade cordless and corded hand-held power tools and accessories, introduces the 5” Variable Speed Concrete Renovation Grinder (603825750 or US603825751), made in Germany.

“Metabo’s new 5” variable speed renovation grinder (RSEV 19-125 RT) makes removing old masonry layers, smoothing concrete or removing tile mortar or mastic fast, efficient and totally dustless. Typically, grinding these substrates is a tedious and dusty process. However, by combining the new renovation grinder with Metabo’s “best in class” HEPA vacuum and anti-static hose (which helps to prevent static electricity), Metabo offers OSHA compliance, the optimum solution for hand-held masonry grinding.” said Antoine Derché, Metabo’s Director of Product and Marketing.

The 5” variable speed renovation grinder is significantly more powerful than its predecessors with a 15 amp high torque motor and a no-load speed of 3,800-8,200 RPM. The solid die-cast aluminum shroud and gear flange are designed to cool and clean, extending the tools life from every day use and heat build-up.

The shroud can be opened so the user can grind flush against a wall. The renovation grinder has vario-tacho-constamatic full-wave electronics which allow the tool to maintain a consistent speed under load, as well as the ability to set a specific speed for a targeted application. The adjustable ergonomic bow handle in the front and rat tail grip with lock-on switch reduce user fatigue, and the shroud brushes are spring loaded, so when the working surface is uneven, the tool maintains contact with the material.
